Instructor: Dr. Reva Freedman
Email: rfreedman@niu.edu
Phone: Faculty offices do not have phones. In emergency (i.e., if email not available), call the CSCI office at (815) 753-0378, and they will forward a message.
Office hours: TTh 12:30-1:45 PM in PM-554
TAs: Akhil Namburi, MW 1-4, z1856517@students.niu.edu, FR-225
Sindusha Devi Parimi, TTh 10-1, z1855951@students.niu.edu, PM-356

Course web site: Reference materials at http://www.cs.niu.edu/~freedman/470/
Most course materials will be on Blackboard under CSCI 470
Sample code will be on turing at ~t90rkf1/d470

Course description:
This is an intermediate-level course in object-oriented programming in Java, including class definitions, collection, streams, I/O, multi-threading, graphical applets, and Internet-based distributed client-server database applications. There will be an emphasis on system and program design. Students will demonstrate their learning of these concepts through the writing of professional-quality object-oriented Java programs using appropriate software and libraries.

Course objectives:
1) To understand the most important concepts in Java, including class definitions, collection, streams, I/O, multi-threading, graphical applets and Internet-based distributed client-server database applications.
   2) To be able to use these concepts to create professional-quality object-oriented Java programs and systems, both on Linux using an editor and on Windows using a GUI.

Communication with the professor: The best way to contact me is in person, followed by email. I will be happy to talk to you about questions or concerns at any time, including any topic relating to this course or other relevant topics. I encourage you to address small problems before they become big problems, not the day before the exam.

I try to respond to email by the next business day, but there are occasional exceptions. Questions that can be answered from reference material may not be answered. Questions requiring major debugging are best handled in person.

If you need to send code, send a zip file using the same format as for submissions. Do not send pictures of any textual data, i.e., copy and paste the text instead.

Late-breaking news, e.g., errors in assignments and weather emergencies, will be posted on Blackboard. Personal messages will be sent to your NIU email. I suggest you check both every morning.

Your TA is generally your best first reference for homework issues.
Class schedule: If the university is closed for weather or other reasons, class will automatically be cancelled. If weather or other emergencies arise, class cancellations will be announced as soon as possible via Blackboard.

In addition, extensive information about the topics covered in class can be found in the slides, on the class website and/or on websites of your choice. Class attendance will be necessary to keep up.

Attendance and quizzes: Attendance is required. I will not explicitly take attendance. However, I will regularly give unannounced quizzes. There are no makeup quizzes. If you arrive after the quiz, you have missed the quiz. The lowest two quiz scores will be dropped.

You are responsible for all material covered in class. If you miss a class, you must get notes from another student before the next class, not from the instructor. Research has shown that students who attend class regularly do better regardless of other behaviors.

Although many or most class materials will be posted on Blackboard, that is for your convenience. This is not an online class, and there is no assumption that you can learn everything without coming to class.

Class participation: Class participation is encouraged and will make the class more interesting for you and for the other students. If you have a question, there are probably three other people with the same question who are even more shy than you.

Please ask ASAP if you don’t understand, if I make a mistake, or if you are just curious about something. Questions about details, big ideas, concepts, algorithms, examples, related ideas and applications are all welcome.

Assignments: Assignments may include small pieces of code, larger programs and projects, and possibly pencil-and-paper assignments. Graduate students are required to do an additional assignment that shows that they are able to integrate the material.

Unless otherwise specified, the following rules apply to all assignments. Assignments must be submitted as defined in the assignment writeup. You will receive 10 extra points for assignments submitted 24 hours before the deadline. There will be a penalty of 10 points for the assignment for each day or portion of a day for late programs, and no programs will be accepted more than 2 days late. I suggest you submit your assignments by 11:57 PM to make sure they are received on time.

In general, there are no waivers of the late penalty or extensions beyond this period. No programming assignments may be submitted after the last day of classes.

Your 4-letter ID is the first four characters of your last name as it is recorded on myNIU. All quizzes, written assignments and exams must contain your 4-letter ID in capital letters along with the quiz or assignment number. All assignments submitted on Blackboard must use the naming convention specified in the assignment, including your 4-letter ID in lower case.

To receive full credit, programs must (a) work, (b) follow the specifications, (c) be comprehensible to humans, (d) be accompanied by any requested writeup. If multiple versions (e.g., source, object, and/or output) are required, they must be consistent.

There will be a penalty if your program does not follow the coding, layout, documentation or
submission standards referred to in the assignment, for example, e.g., if you do not submit the
correct format, do not submit all the files, submit extra files or submit files with incorrect names.

You may not use external code (from other people or from the web) without permission, with the
exception of code from the official Java libraries. All Linux assignments must run on
turing/hopper unless otherwise specified. I encourage you to develop them on turing, but if you
don’t, make sure you test them on turing before you submit them. Windows assignments must
run on the GUI specified in the assignment. There will be a penalty for not following directions,
e.g., not following naming conventions, not following the class style guide, not submitting files
in the correct format, not using the assigned directory structure, not submitting all the files or
submitting extra files.

If you find you have made a mistake, you may resubmit once before the deadline. The later
submission time will count with regard to whether you receive extra credit.

If you believe your assignment has been graded incorrectly, you must see the professor or the
T.A., as appropriate, within one week after the assignments have been returned.

Assignment submission: Name your main program Hwnn.java, where nn is the assignment
number. Make a directory for submission named Hwnn, where nn is as above. That directory
should contain only your source files (main program and other source files), with no object files,
test files, extra subdirectories or other files.

Your four-letter ID is the first four letters of your last name. If your last name is less than four
letters long, then use your full last name. If your last name contains a blank, use only the part
before the blank. If you and another student have the same first four letters, I will give you a
different four-letter ID.

Zip up the submission directory. Name your zip file hwnn-xxxx.zip, where xxxx is your
4-letter ID in lower case and nn is the assignment number. (Note that this entire filename is in
lower case.)

Double-check your zip file to make sure that it includes exactly one level of subdirectory and
that the names are correct.

Zip is available on turing/hopper, or you can use one of the many free implementations
available.

There will be a penalty for violating these rules, e.g., submitting extra files, missing
subdirectory, extra levels of subdirectory, using a different compression program, or
naming your files differently.

Submit the zipped file on Blackboard. We will compile and run them on turing/hopper. You will
lose points if your program does not compile and run on turing/hopper.

Specific directions will be given for submitting assignments created with a Windows GUI.

Coding style:
You must follow the style guide for this course on the course web page. There is a pointer on
Blackboard, and it is also accessible directly at:

**Exams:** There will be one or two midterm exams and a final. There may also be mini-exams that will not take the full class period. Dates of the exams will be announced approximately one week in advance. If there are mini-exams, dates will be announced at least one class period in advance. The final exam will take place during the final exam slot, Tue., May 5, 2-3:50 PM. The exams will most likely be traditional closed-book, closed-notes exams. Exams will be conducted in accordance with the department’s academic integrity policy, which is available on the course web site.

With regard to concepts, each exam will cover one section of the course material (the final will not be cumulative). With regard to programming, programming is inherently a cumulative activity, so the exams may include programming constructs from earlier in the course.

Exams will include material from the lecture notes, written assignments and programs. For each exam, a review sheet will be posted listing all the possible conceptual questions (in a somewhat different format). Exam formats will include multiple choice, fill-in-the-blank and similar formats. They also may include some short pieces of code to write (10-15 lines or so). You will not be required to memorize names of libraries or similar issues. There will be no essay questions. Slides used in class will be posted at some point after the lectures in which they are used.

Examples for the programming questions on the exams will be available from sample code and the homework. Programming questions will assume that you have not only done the homework but learned from it, i.e., copying code from the sample programs used in class without learning from them may give you a working program but is less likely to give you the level of understanding you will need for the exams.

You are expected to take the exams on the assigned time and date. Missing an exam is an extremely serious matter: makeup exams will only be given if either (a) or all of (b), (c) and (d) are satisfied: (a) an unavoidable reason (e.g. car accident) with notice as soon as possible, (b) advance notification, (c) written documentation, (d) permission of instructor. For the final exam, permission of the department is also required.

Please notify me as soon as possible if you meet the university’s criterion for rescheduling a final exam, i.e., you have three finals on the same day and this course is the highest-numbered of the three, or if you have another final exam at the same time. The university deadline for scheduling a makeup final is Monday of the last week of classes. Documentation will be required.

**Grading:** Each homework will be assigned a point count according to difficulty and the amount of time required. Grades will be calculated as follows: Exams 40%, assignments 45%, quizzes 15% (grades will not be curved or rounded).

<table>

Class decorum: In classes for freshmen, I state the following rule on the syllabus: “No activity that interferes with learning, i.e., one that may distract other students or the instructor, is permitted in class. For example, eating, talking (whether in person or on the phone), newspaper reading, and regularly being late or leaving early are not permitted.” In a class for seniors and graduate students, I assume it is not necessary to state such a rule explicitly; however, the rule remains in force.

Research has shown that activities such as texting and checking your email interfere with your retention of the material, however, they in general do not interfere with other people’s ability to concentrate. Therefore these are permitted if you need to indulge in them. Please do not sit in the front row if you intend to engage in these activities, as it is distracting.

Special circumstances: Students with special needs (disability accommodation, religious observances, required military service, major illness or other unexpected events) are encouraged to contact the instructor as soon as possible. Commuting, having a lot of work for your other classes, being busy at your job, and network problems are not special circumstances; they are normal circumstances that everyone has.

Disability accommodations: The instructor will provide all of the accommodations to which you are entitled by law. If you need an accommodation for this class, you must provide a notification letter from the Disability Resource Center. Once you provide a copy of the notification letter, we will have a private conference to determine how your approved accommodations will be handled in this class. This conference must be held and agreement reached before any accommodations can take effect. No accommodations will be allowed retroactively.

If you wish to take your exams at the DRC office, you must also follow DRC regulations with regard to exam scheduling.

For these reasons you should contact the DRC as soon as possible. They are located on the first floor (room 180) of the Campus Life Building, and can be reached at 815-753-1303 or drc@niu.edu. Also, please contact me privately as soon as possible to discuss possible accommodations – there is no need to wait until you have received the notification letter.

Academic integrity: You are encouraged to study together, however, that does not mean doing assignments together. Practice on problems from class, from the slides, or your own problems. Do the programs and any written assignments yourself.

You are expected to do your own work on the homework, programs and exams. Cheating includes, but is not limited to, copying work from other students, copying work from other textbooks, copying work from the Internet, or allowing others to do the same, whether deliberately or not.

You may not post material from this class, including answers to the homework assignments, on any public web site.

All cheating will result in the filing of an academic misconduct form and will affect your course grade, with the possibility of failing the course and/or losing your student job. The penalty for a first offense is usually two letter grades. Note that a second academic misconduct offense may result in your expulsion from the university.

We may use mechanized source comparison on the programs.
